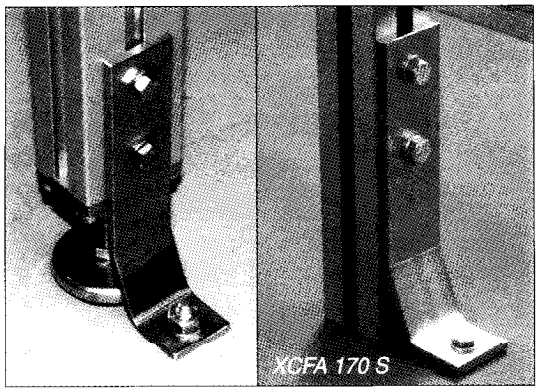
## Floor attachment brackets



**Introduction**

Floor attachment brackets are used to anchor beam structures to the floor. For light structures the brackets can replace feet. For heavy structures they should be used in combination with adjustable feet.

The brackets are connected to the T-slots.

Bracket XCFA 170 S is designed to fit any XC beam that has at least one T-slot.

Accordingly, bracket XFFA 100 S will fit any XF beam provided with at least one T-slot.
