QUICK GRIP DRILL PRESS VICE - FIXED JAW

JAW WIDTH	MAX OPENING	ORDER CODE
80mm	80mm	IND-445-0170K
100mm	100mm	IND-445-0180K

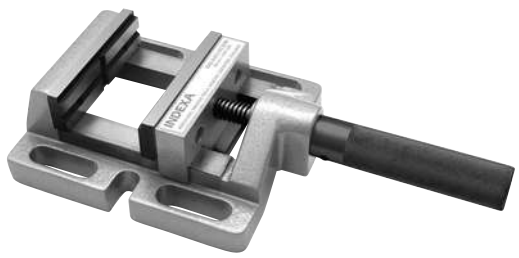

Always read instructions before use!

INDEXA Eccentric drilling machine vices are designed for quick clamping of workpiece during drilling and milling works with special consideration of serial production.
Quick clamping of the workpiece is achieved with eccentric mechanism. The preliminary setting of clamping range is made with handwheel of feed screw.
The body and movable jaw are moulded from high quality cast-iron moulds.
The replaceable jaw inserts are induction-quenched and ground, with knurling to guarantee firm and safe clamping.
The fixed jaw insert has horizontal and vertical 'V' grooves to enable clamping of shafts and rods.

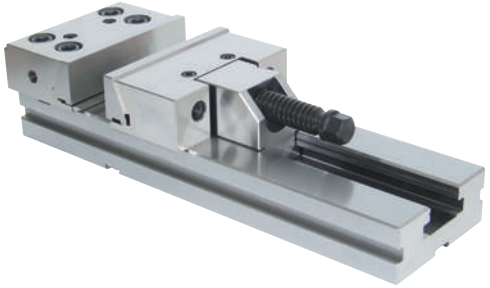

Size S	A	B	H	L	a	h	k	Max Jaw pitch	Max clamping force daN
