# SER2525M22 SIZE 22 EXTERNAL THREADING TOOL HOLDER

Indexable Threading External Toolholders are engineered for precise external threading in CNC and lathe operations. They use a secure screw clamp system to ensure stability and accuracy during cutting. The 1.5° helix angle supports smooth chip flow and consistent thread quality. Suitable for use in metalworking, automotive, aerospace, and manufacturing environments, they deliver reliable performance in demanding applications.

**Features and Benefits**

- Screw clamp design holds inserts firmly under cutting pressure
- 1.5° helix angle enhances chip evacuation and cut smoothness
- Minimizes vibration for cleaner, more accurate threads
- Built for tough industrial use and extended tool life
- Suitable for high-precision CNC and lathe applications
