KENNEDY®

Order Code:
KEN-121-9608Q

22ERN60 QMA PARTIAL PROFILE 60 DEGREE EXTERNAL THREADING INSERT

These Kennedy External Threading Inserts are engineered for precision and performance. These fully ground thread turning inserts are ideal for threading steel, stainless steel, and exotic alloys at medium to high cutting speeds. With a PVD TiAlN coating over a sub-micrograin carbide core, they deliver long tool life, excellent thread quality, and reliable performance in demanding applications across aerospace, automotive, and medical industries. They are suitable for P20-P40 and K20-K30 machining conditions and they offer a powerful solution for accurate, efficient threading.

Features and Benefits

- Superior wear resistance for longer tool life
- High heat tolerance enables faster cutting speeds
- Sub-micrograin carbide core ensures durability and strength
- Precision-ground edges deliver clean, accurate threads
- Reliable in high-speed, high-load threading applications
