CERAMIC QUICK CHANGE DISC 50mm P60

These ceramic quick-change discs are designed to maximise productivity in demanding applications by enabling rapid, tool-free disc changes. Featuring a high-performance ceramic alumina abrasive grain, these discs deliver aggressive material removal with a cool, fast cut - even under moderate pressure. Engineered for use on extremely hard materials including stainless steel, Inconel, chromium cobalt, and titanium, they are ideal for defect removal, surface preparation and finishing. The discs incorporate a supersize layer with active filler technology that promotes cooler cutting and extends product life, making them a reliable choice for both industrial and precision applications.

Features and Benefits

- Premium ceramic grain ensures powerful, cool cutting on hard-to-machine alloys
- Quick change system minimises downtime and boosts productivity
- Aggressive cutting action quickly removes surface defects
- Supersize layer reduces heat build-up, preserving workpiece integrity
- Low edge fray maintains consistent performance and disc integrity
