ELECTRONIC EDGE FINDER WITH LIGHT AND SOUND

The Electronic Edge Finder provides fast and precise positioning of workpieces for milling, drilling and machining operations. Designed with a high-sensitivity probe, it instantly lights and beeps when contacting electrically conductive materials, ensuring accurate zero setting. The hardened shank and contact ball deliver durability and reliable performance, while six visible light ports allow easy reading from any angle. Ideal for improving accuracy and efficiency in workshop and industrial environments.

Features and Benefits
- Instantly lights and beeps on contact for fast detection
- High-sensitivity probe for precise positioning
- Suitable for all electrically conductive materials
- Hardened shank and contact ball for durability
- Determines workpiece edge accurately for zero setting
- Six light ports visible from any angle
- Provides reliable alignment relative to spindle centreline
