¼" - 100mm INSULATED EXTENSION BAR

These VDE Insulated Extension Bars enable safe access to deep or obstructed fasteners in live electrical and industrial environments. Certified to VDE IEC 60900:2018, they provide protection up to 1000V AC/1500V DC, ensuring operator safety during high-voltage maintenance tasks. The fully insulated shaft and anti-roll hex design offer stable torque transfer and prevent accidental tool slippage, even in confined panels. Compatible with VDE ratchets, sockets, and torque wrenches, they extend reach without compromising electrical safety or control.

Features and Benefits

- Fully insulated shaft prevents current transfer while maintaining consistent torque delivery
- Anti-roll hex profile enhances stability and prevents unwanted tool movement
- High-strength alloy core ensures durability and torque reliability under professional use
- Universal drive fits all standard VDE sockets, ratchets, and torque wrenches for system integration
- Precision-machined ends allow smooth connection and disengagement for efficient workflow in tight spaces
