Super Ferritic Clamps

The Supra Ferritic Clamp is a superior clamp to the quality Gold clamp with the added advantage of being a Stainless Steel band with a Carbon Steel, Zinc Plated bolt.

Unlike Super, all components are retained when the bolt is removed, thus facilitating ease of use with conventional assembly and automated tools. It has gained acceptance in those application areas where a band of Stainless Steel is required over Plated Carbon Steel but not with the associated costs of a full Stainless Steel clamp.

It has bevelled edges to reduce wear and tear to the hose.

The band bridge protects and reinforces the articulated tensioning system. Recommended torque tightening values and working pressures are published and are available.

Applications:

Commonly used in hose assembly manufacturing, agriculture, hydraulics, general engineering, chemical and food processing industries.

Sizes Availab1e:

l7-252mm.
