K1000
The KEYGUARD is not your average key box it has been designed with safety as well as security in mind. The KEYGUARD is able to take both KEYS and CARDS and is available with or without alarm facilities, either battery powered alarm or simply as a single pole micro switch making it suitable for many applications. The window is designed in such a way that it cannot be refitted after removal. The KEYGUARD plastic window enables it to be used in such areas as schools, food preparation areas and swimming pools. There are no shards of glass or sharp edges that could cause injury.

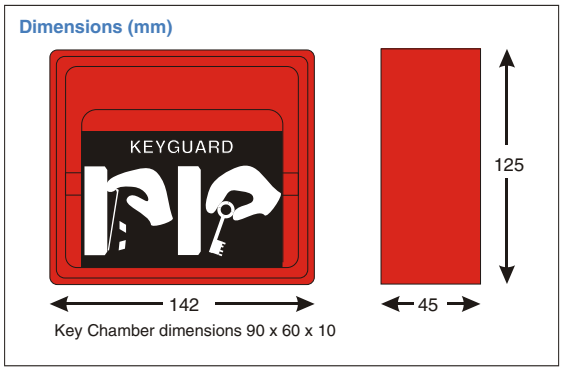

K1010
This version of the KEYGUARD has an integral audible alarm powered from a PP3 Alkaline battery (supplied). If any attempt is made to remove the plastic retention window then the alarm is sounded. The alarm can only be silenced by fitting a new window.

K1020
The K1020 versions of the KEYGUARD are fitted with a single pole changeover contact microswitch. This switch is terminated as voltage free for connection the users own equipment. The contacts are rated at 10A 240vac. They should only be used at low voltage, the case of the KEYGUARD is not designed to enclose mains voltages.

All KEYGUARDS are supplied with fixing screws wall plugs and fitting instructions.

K1030Gr
Keyguard spare plastic windows are available in packs of four and are printed with graphical user instructions making the Keyguard truly multi lingual.
