The new program:
Pluggable interface relays by ABB

Interface relays are widely used in various industrial applications: As an interface they link the electronic controlling, e.g. PLC (programmable logic controller), PC or field bus systems, to the sensor / actuator level. Here, they take on various functions: Switching of AC or DC loads with different resistive, inductive and capacitive parts, switching voltages from a few mV up to 250 V, switching currents from a few mA up to 16 A, amplification of weak control signals, electrical isolation of control and load circuits, and signal multiplying. In contrast to electronic switching devices, interface relays don't use additional internal protective circuits and thus are overload-proof against short-time variations like current or voltage peaks.

ABB pluggable interface relays are offered in three product ranges: Pcb relays CR-P, miniature relays CR-M and universal relays CR-U. The advantages will convince you:

- 12 different coil voltages:
  12 V DC, 24 V DC, 24 V AC, 48 V AC, 48 V DC, 60 V DC, 110 V DC, 125 V DC, 220 V DC, 110 V AC, 120 V AC, 230 V AC
- All relays are cadmium- and lead-free.
- Our relays feature all major international approvals.
