DTK Series Temperature Controller Data Sheet

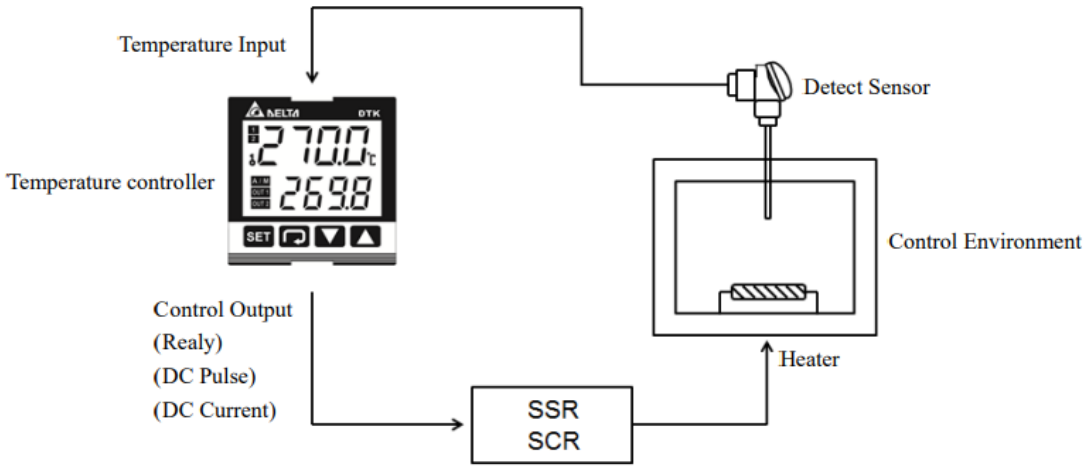

Product Features

DTK series is a new temperature controller with a high cost-performance ratio. It greatly decreases development costs and time, and improves the functions of temperature control systems. With a length of only 60mm and high-resolution LCD display, it is easy for operators to monitor the temperatures of any environment or occasion.

- High-resolution LCD panel: High contrast and customized display graphics for user's easy understanding.
- High-speed sampling time 100ms: High-speed sampling for external temperature measurement and fast output response for performance requirements of high-precision control.
- Shortened length to 60mm: Shorten the length of the controller to reduce the installation space.
- Conform with CE international safety certification

Basic System Structure

DTK obtains the temperature of the controlled environment from the sensor and sending the measured data to the electronic processor. After computing and under a fixed control cycle, it proportionally sends the heating signal via different output interfaces such as relays, voltage pulse or DC currents. By providing power to the heater and raise temperature, DTK will then control the temperature variation within a specific range.
