This mouse gives you an instant click.

Ergonomics that feels natural

The FastForward is designed with an angle of inclination of 75˚ , which automatically puts your hand in a natural, relaxed position. This prevents tension in your hand, wrist and forearm, supports better posture and helps prevent common complaints such as RSI and carpal tunnel syndrome. It feels as natural as shaking hands with someone (but without uncomfortable eye contact). As a result, you don't have to get used to an ergonomic posture for a long time. These ergonomic benefits have been substantiated by research, in which a vertical hand position is linked with less muscle tension (Aarås et al., 2001; Quemelo & Vieira, 2013). Your wrist stays straight and the clicking motion becomes lighter, reducing the force your fingers need to apply.

Ergonomic background

Prolonged use of a regular mouse can lead to pain and discomfort in the shoulders, forearms, and hands (Chang et al., 2007 & Andersen et al., 2008). The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013). Research has shown that the use of a vertical joystick mouse ensures a faster recovery from forearm, wrist and hand complaints (Aarås, et al., 2001). And therefore, vertical mice compared to standard mice lead to a healthier and more comfortable way of working.
