Tender text

Cable clamping for all Rittal power system module C13 plug templates

Cable clamping for PS modules fitted with C13 IEC plugs. The bolt, which has been especially designed for PS module systems, can clamp two connection cables. This ensures that all of the final unit's connection cables are protected against unintended power supply removal.
Two bolts are required for two C13 connection cables. An optimum locking function can only be provided if the connection cable is used (DK 7856014).
