Think ahead.

NEW and improved Tork Cleaning Cloths for W4 and W7 Systems

More efficient, more sustainable

We know that to meet goals and stay ahead of the competition you need to make continuous improvements that support productivity, while also meeting your sustainability goals.

Improving efficiency
To help you optimize cleaning processes and reduce waste, Tork has a range of product innovations that contribute to faster, more efficient access to cleaning cloths:
– New interfolded cloths allow for One-at-a-time dispensing
– Easy to access cloths, even when wearing gloves
– Encourages operators to take only what they need, for reduced waste
– Flexible dispenser mounting options, for optimized placement and workflow

Increasing sustainability
As part of your drive towards a more environmentally friendly business, Tork products are being designed with increased sustainability in mind:
– exelCLEAN® cloths with reduced carbon footprint by 28%[1] over the last decade
– Packaging made from 100% recycled cardboard and 30% recycled plastics
– New biobased products with a lower environmental impact

One-at-a-time dispensing makes it easy to take cloths – even when wearing protective gloves

32%
time saved with Tork cleaning cloths vs. rags[2]

1. Based on a Life Cycle Analysis conducted by Essity and IVL Svenska Miljöinstitutet verified in April 2021 against Tork exelCLEAN® in 2011.
2. Tested by removing paint that had dried for 4 minutes from a metal surface 60x90 cm with the aid of a solvent, white spirit. The paint, alkyd based primer, was applied by a roller. Panel participants started off by using 10 ml solvent and were able to add more solvent into the cloth in steps of 5 ml per occasion. Panel test conducted by Swerea Research Institute, Sweden, 2014. Cotton rags and mixed rags were compared to Tork Heavy-Duty Cleaning Cloths.

Meet sustainability goals without compromising performance

By implementing continuous incremental changes, operators can both deliver real world time savings and also contribute to more sustainable business.

Tork products are designed without compromise – sustainability should always be delivered in a form that maximizes productivity. For example, improvements in the manufacturing process mean that Tork cleaning cloths have a 28% lower carbon footprint[1], while our new range of biobased cloths still meet the highest standards for absorption and durability.

How Tork can help at the manufacturing site:

- Continuously improve productivity and meet sustainability goals
- Facilitate One-at-a-time dispensing, for both easier, faster access and reduced waste
- Increase efficiency with lighter and easier to carry packs
- Optimize dispenser placement, closer to hand

Upgraded packaging

Packaging design has been improved – our Handy Box (W7), for example, is lighter and easier to carry with a larger handle for easier placement while wearing gloves. The shape of the box opening has been redesigned, allowing for more convenient access.

1. Based on a Life Cycle Analysis conducted by Essity and IVL Svenska Miljöinstitutet verified in April 2021 against Tork exelCLEAN® in 2011.
