ITL

INSULATED TOOLS FOR LIVE LINE WORKING

MADE IN GREAT BRITAIN

The *ULTIMATE* in electrical and live line protection

ITL has over half a century's worth of experience producing insulated tools to the highest standard possible.

We manufacture unique, injection moulded, insulated tools from Nylon Thermoplastic. All our tools are 100% tested to IEC 60900, Category C and ASTM. F1505.

All over the world the professional uses ITL Insulated Tools:

- We are the only company to insulate its tools with a unique injection moulded Nylon Thermoplastic recipe
- Tool and insulation bond as one
- Withstand extreme impact and abrasion
- Flame Retardant
- Stronger and harder than PVC coated tools
- 100% Production Tested –10,000 volts for 3 minutes submerged in water
- Accredited to IEC 60900:2018 – the International Standard for Live Line Working Tools
- Category "C" Impact Tested – for operation within greater temperature range **-40ºF to +158ºF -40ºC to +70ºC**
- Lifetime warranty on tool and insulation

THE FACTS SPEAK FOR THEMSELVES

FACT

ITL is the only manufacturer to insulate its tools with Nylon Thermoplastic

FACT

Unique Nylon Thermoplastic injection moulding process

Increases tool safety & durability

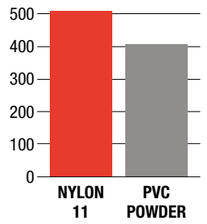

FACT

Tool and insulation bond as one

Higher tool to insulation integrity

PROCESSING TEMPERATURE
Average - ºF

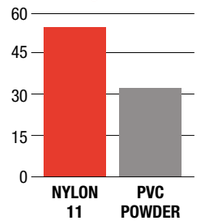

FACT

Much stronger than PVC coated product

Longer tool life and increased cost effectiveness

TENSILE STRENGTH
Average - MPa

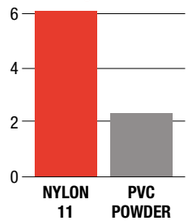

FACT

Harder than PVC dipped product

Tougher tools that withstand extreme field requirements

IZOD IMPACT
Average - J/cm

FACT

Lifetime Warranty on tool and insulation

LIFETIME WARRANTY
TOOL & INSULATION

FACT

All ITL tools are accredited to **International Standard IEC 60900:2018 including category 'C"** for operation within greater temperature range **-40º to +158ºF**

TOOL KITS

To complement our comprehensive standard range, we can offer a totally customisable service. Choose your own selection of tools presented in our orange case, 8 or 12 pocket tool roll, tube or pouch. In addition, order a specified minimum quantity and we can supply blow moulded cases complete with custom made foam inserts.

The ITL team are inspired by the great British scientists of the past who made the electrical discoveries that our business relies on every day.

We have named our flagship kits in their honour.

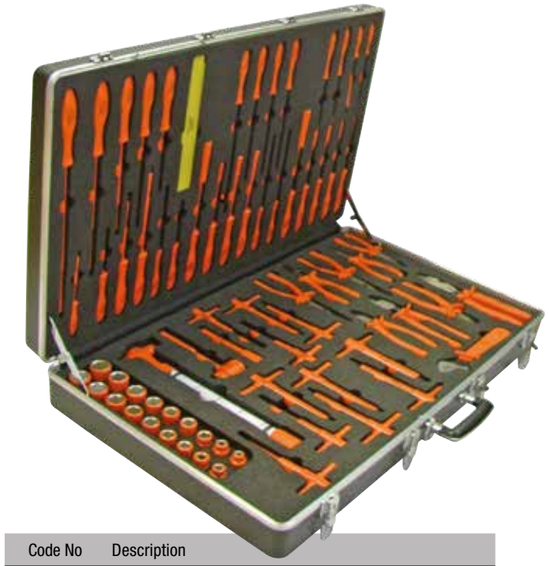

KELVIN

Born William Thompson, the 1st Baron Lord Kelvin was the most famous electrical scientist of his day. Before his achievements in the field of physics, Kelvin made his fortune as a telegraph engineer, and soon became a household name in Victorian Britain. A patron of the sciences and President of the Royal Society, Queen Victoria knighted him in 1866, and his fame lives on in the temperature scale that bears his name.

FARADAY

Everything we do at ITL has only been made possible by this brilliant pioneer's work. Regularly named as one of the top 10 scientists who ever lived, the influence of Michael Faraday continues to be felt to this day – even down to having the honour of our naming our flagship toolkit after him.

FRANKLIN

The all-round American Renaissance Man, Ben Franklin was one of the great scientific geniuses of the 18th century. He allegedly investigated lightning by flying a kite into a storm cloud. Who better then to lend his name to the imperial version of our popular 29 piece Toolkit – a true all-rounder with almost everything an electrical technician needs.

Code No	Description

1/2" DRIVE SOCKET SETS

HEAVISIDE

We like our hard-working eccentrics here at ITL, and Oliver Heaviside was one of the best. A "first-rate oddity" according to one of his friends, Heaviside was a self-taught electrical engineer and physicist who reformulated Maxwell's equations and applied them to solve practical problems with electricity transmission and telegraphs deep underground. His reputation was boosted when he was congratulated by Lord Kelvin.

Code No	Description
00023	**12 PIECE HEAVISIDE KIT**

Daniell

John Frederic Daniell invented the Daniell Cell, one of the forerunners of the modern battery. His cell was so revolutionary that its output was used to benchmark what the value of 1 volt would be – so when we test our tools at 10,000v, the equivalent of 10,000 Daniell Cells! We are proud to name our premier battery maintenance kit after him.

Along with our core range which has been selling since the 1960’s every year we launch our new products from our portfolio of ideas and collaborations, ensuring the market has a solution for any job.

We unleash our innovation potential by working with the best in the industry as well as our own impressive design engineers who constantly strive to improve on what we or others create.

For nearly 60 years our partners and customers have placed the maximum demands on our products with regards to material, design, manufacturing, precision, strength and durability. With this we continue to define ourselves as the company who makes the best, safest and most robust insulated hand tools globally allowing people all over the world to work safely and productively.

LINK BOXES

Link boxes, also known as low voltage network boxes, are the linchpins of the electrical distribution network.

As our demand for electricity increases, DNO’s are under increasing pressure to keep power outages to a minimum and maintain a reputation for reliable supply. They use link boxes as switching points, allowing electricity to be rerouted in the event of a cable fault. This ability to electrify and de-electrify parts of the distribution network is essential.

At ITL we have been at the forefront of coming up with bespoke solutions for link box maintenance. Many link boxes in urban areas date from the early 20th Century and have features that present challenges to engineers, such as difficult to access links, obscure gauge sizes (eg. ½” Whitworth) and archaic link housing. We have developed solutions for all these and more.

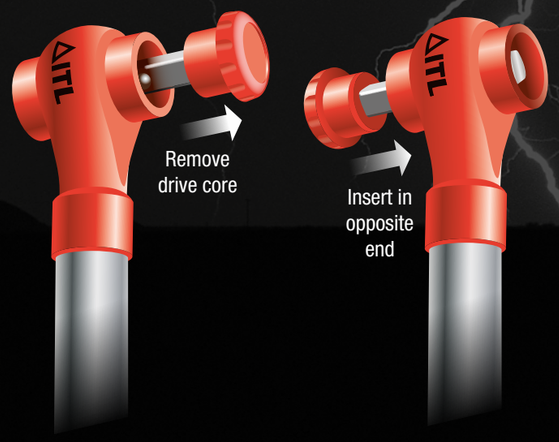

TORQUE TOOLS

Innovative, fully tested and certified range of insulated torque tools, ensure correct tightening of live connectors. Designed to help address the problem of exploding manholes. Includes test certificate.

Thompson

James Thompson may be less famous than his younger brother William who became Lord Kelvin, but he is the man to thank for introducing the word "torque" into the English language. It's because of him that this kit contains the best insulated torque wrench in the industry. This 3/8" kit is part of our suite of specialist torque tools, and is ideal for working on link boxes and other enclosed junction boxes.

Code No	Description

Cooke

After getting advice from Michael Faraday, William Fothergill Cooke joined with Charles Wheatston to demonstrate the world's first electric telegraph line. They ran it from Euston Station to Camden Town in front of a crowd of interested onlookers. After securing a patent from the King they formed the Electric Telegraph Company – which later become British Telecom. This special kit has been developed in collaboration with BT, and continues their heritage for high quality and innovation.

PLIERS & CUTTERS

Combining the best possible steel with state of the art insulated hand tool manufacturing we created a wide range of premium quality pliers.

Protective design to allow a secure hold when rotating and pulling

Highest quality cutting edges – maximum cutting performance

Ergonomic, injection moulded handles – tool and insulation bonded as one

SPANNERS & WRENCHES

Expansive range of Insulated spanners for frequent use and safety for your everyday work.

Thumb stops for ultimate safety, setting ITL apart. We incorporate this design quirk for use in those dark, tight spaces

Comfortable to hold with ergonomic design

High torque, dimensionally accurate and precise quality base tools

OPEN ENDED SPANNERS TOTALLY INSULATED

DRIVERS

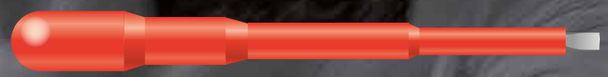

Screwdrivers, Nut Drivers, Hex Drivers, Link Extractors and Specials

Hardest most durable insulated drivers on the market with 3 stage moulding process giving a fully insulated shaft and handle for supreme safety.

3 STAGE MANUFACTURING PROCESS

1. Screwdriver blade moulded with preliminary extrusion

2. Moulded with handle core to cover top of shaft

3. Moulded with final injection incorporating handle – tool now fully insulated

Ergonomic tri-globular grip design

Precision made tempered blade tip ensuring optimum power transfer onto screw head
