For static applications
1- and 2-axis measurement

IN48 | **Fieldbus**

High accuracy with minimal movement.
Measurement is performed capacitively in acceleration measurement cells for applications with little or no movement. Vibrations and shocks can be compensated for within certain limits by software filters.

Technical data

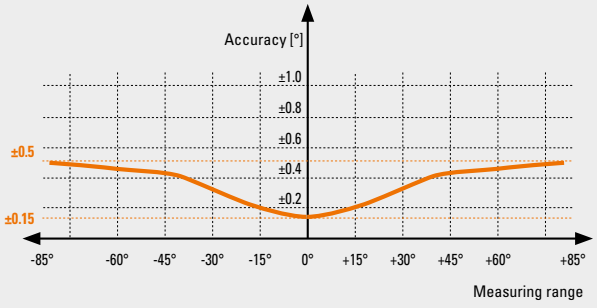

General data 1-axis measurement

Measuring range	0 ... 360°
Resolution	0.01°
Repeat accuracy	±0.2°
Linearity	±0.1°
Temperature coefficient	typ. ±0.006° / K
Accuracy (at 25°C)	±0.15 ... ±0.2° depending on the measuring range

General data 2-axis measurement

Measuring range	-85 ... +85°
Resolution	0.01°
Repeat accuracy	±0.2°
Linearity	±0.3°
Temperature coefficient	typ. ±0.006° / K
Accuracy (at 25°C)	±0.15° ... ±0.5° depending on the measuring range

General electrical characteristics

Supply voltage	7.5 ... 30 V DC 5 V DC
Current consumption	max. 40 mA
Reverse polarity protection of the supply voltage	yes
Sampling rate	50 Hz (20 ms)
Limit frequency with Butterworth filter	0.1 ... 10 Hz, 8. order
factory setting	typ. 10 Hz

EMC

Relevant standards	EN 61326-1	Electrical equipment for measurement, control and laboratory use
	EN 55011 Klasse B, EN 61000-6-3	Emitted interferences for residential environments

Mechanical characteristics

Electrical connection	M12 connector, 5-pin cable, 5-core
Weight	approx. 60 g [2.1 oz]
Protection acc. to EN 60529	IP68/IP69k
Working temperature range	-40 °C ... +85 °C [-40 °F ... +185 °F]
Material housing	plastic, PC
Shock resistance acc. to EN 60068-2-27	1000 m/s², 6 ms
Vibration resistance acc. to EN 60068-2-6	100 m/s², 10 ... 2000 Hz
Dimensions	44.5 x 42.5 x 20 mm [1.75 x 1.67 x 0.79“]

Approvals

E1 compliant in accordance with	ECE guideline
UL compliant in accordance with [1]	File no. E224618
CE compliant in accordance with	
EMC Directive	2014/30/EU
RoHS Directive	2011/65/EU

1) The IP protection class is not UL-tested. Verified by Kübler.

Interface characteristics CANopen

General information on CANopen

The CANopen inclinometers support the latest CANopen communications profile according to DS301. In addition, device-specific profiles such as the inclinometer profile DS410 and DS305 (LSS) are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values and many other additional parameters can be programmed via the CAN bus. When switching the appliance on, all parameters are loaded from a flash memory. These parameters have previously been stored in a zero-voltage secure manner. The output values **position, position raw value, sensor temperature and sensor information** can be combined very variably as a PDO (PDO mapping). The inclinometers are available with one or two connectors.

The device address and baud rate can be set/modified by means of the software.

The two-color LED indicates the operating or fault status of the CAN bus, as well as the status of the internal diagnostics.

Characteristics CANopen

Interface		CAN high-speed acc. to ISO 11898, Basic- and Full-CAN, CAN specification 2.0 B
Protocol		CANopen profile DS410 V1.3 with manufacturer-specific add-ons, communication profile DS301 V4.2
Baud rate	software configurable	10 kbit/s, 20 kbit/s, 50 kbit/s, 125 kbit/s, 250 kbit/s, 500 kbit/s, 800 kbit/s, 1 Mbit/s
	default	250 kbit/s
Node address		
	software configurable	1... 127
	default	62
Termination		
	software configurable	0 = OFF, 1 = ON
	default	1 = ON
LSS protocol		DS305 layer setting services 2.2

LSS layer setting services DS305 V2.2

- Global command support for node address and baud rate configuration.
- Selective protocol via identity object (1018h).

CANopen communication profile DS301 V4.2

Among others, the following functionality is integrated (Class C2 functionality):

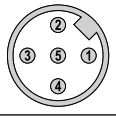

- NMT slave.
- Heartbeat protocol.
- Identity object.
- Error behavior object.
- Variable PDO mapping, 2 sending PDO's.
- Node address, baud rate and programmable CANbus termination.

CANopen Inclinometer profile DS410 V1.3

The following parameters can be programmed:

- Variable PDO mapping of position, position raw value, sensor temperature and sensor information.
- Extended failure management.
- User interface with visual display of bus and failure status - 1 LED two-color.
- Customer-specific protocol.
- "Watchdog controlled" device.

Interface characteristics SAE J1939

General information concerning SAE J1939

The protocol J1939 originates from the international Society of Automotive Engineers (SAE) and operates on the physical layer with high speed CAN as per ISO11898. The application emphasis lies in the area of the power train and chassis of commercial vehicles. It serves to transfer diagnostic data (for example, motor speed, position, temperature) and control information. The inclinometers IN88 support the total functionality of J1939.

This protocol is a multimaster system with decentralized network management that does not involve channel-based communication.

It supports up to 254 logic nodes and 30 physical control devices per segment. The information is described as parameters (signals) and combined on 4 memory pages (data pages) into parameter groups (PGs). Each parameter group can be identified via a unique number, the parameter group number (PGN). Independently of this, each signal is assigned a unique SPN (suspect parameter number).

The major part of the communication occurs cyclically and can be received by all control devices without the explicit request for data (Broadcast). Furthermore the parameter groups are optimized to a length of 8 data bytes. This enables very efficient utilization of the CAN protocol. If greater amounts of data need to be transferred, then transport protocols (TP) can be used: BAM (broadcast announce message) and CMDT (connection mode data transfer). With BAM TP the transfer of data occurs as a broadcast.

Inclinometer implementation SAE J1939

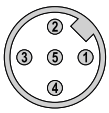

- PGNs that are adaptable to the customer's application.
- Resolution of address conflicts -> Address Claiming (ACL).
- Continuous checking whether control addresses have been assigned twice within a network.
- Change of control device addresses during run-time.
- Unique identification of a control device with the help of a name that is unique worldwide. This name serves to identify the functionality of a control device in the network.
- Predefined PGs for position, speed and alarm.
- 250 kbit/s, 29 bit identifier.
- Watchdog controlled device.

A two-color LED signals the operating and fault status of the SAE J1939 protocol, as well as the status of the internal diagnostics.
