Capacitive proximity sensors

XT range

Detection of insulated or conductive materials

Applications: detection of any object irrespective of material or conductivity, for example: metals, minerals, wood, plastic, glass, cardboard, fluids, etc.

Cylindrical sensors, flush mountable, metal case

Detection of insulated or conductive materials: presence, passage of paper, cardboard, glass, etc.

Cylindrical sensors, non flush mounta

Detection of insulated or conductive mater
Liquid level control

Capacitive proximity sensors
XT range

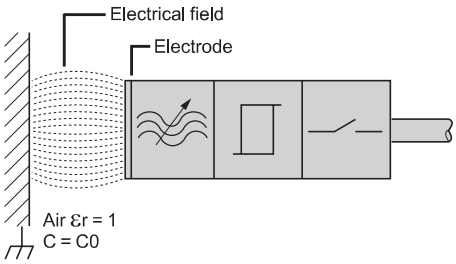

Presentation

Advantages

■ No physical contact with the object to be detected.

■ Solid-state product, no moving parts (service life not related to number of operating cycles).

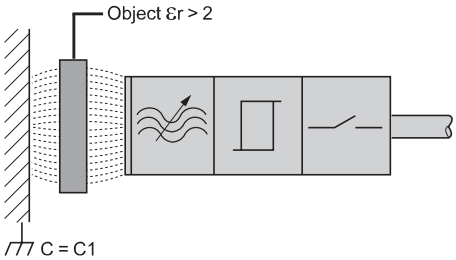

■ Detection of any object irrespective of material or conductivity, for example: metals, minerals, wood, plastic, glass, cardboard, leather, ceramic, fluids, etc.

Operating principle

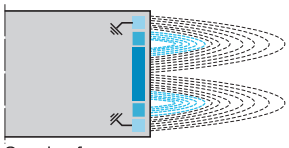

An electrical field is created between 2 electrodes on the front face of the sensor.
These electrodes constitute a capacitor with a capacitance of:
$C = \varepsilon 0 * \varepsilon r * A/d$ where:
$\varepsilon 0 = 8.854\ 187$ pF/m (permittivity in free space)
εr: relative permittivity of the material present between the 2 electrodes
A: dimensions of electrodes
d: distance between electrodes

All materials where $\varepsilon r > 2$ will be detected.

When an object of any material ($\varepsilon r > 2$) passes the sensing face of the sensor, it modifies the coupling capacitance (C1).
This variation in capacitance (C1 > C0) instigates the starting of the oscillator which, in turn, causes the output driver to operate and provides an output signal.

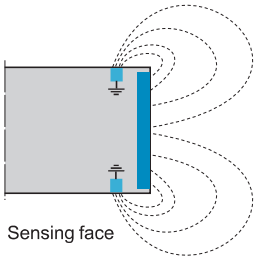

Types of sensor

Sensing face

Sensors flush mountable in support

The special feature of these versions is the shape of the electrical field which is rectilinear and confined within the dimensions of the product.
Cylindrical and block type models used for the detection of insulated materials (wood, plastic, cardboard, glass…), conductive materials (metal…) or liquid through an insulated partition (glass, plastic…) with a maximum thickness of 4 mm.

These products are recommended for:
- comparatively short detection distances,
- applications requiring flush mounting of the sensor,
- detection through a partition (example: detection of glass through cardboard),
- side by side mounting.

Sensing face

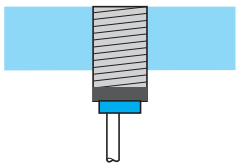

Sensors non flush mountable in support

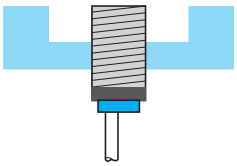

Cylindrical models (plastic case).
The spherical shape of the electrical field enables detection of any type of material whether it be solid, liquid, granular… (metal, water, oil, plastic pellets, powder, flour…).

Detection can be achieved through a partition or by direct contact (immersion) of the active surface with the object to be detected.
Distances to be adhered to around the sensing face. (See characteristics page 17).

Mounting precautions

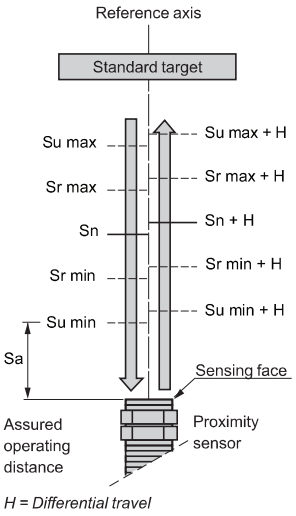

Non flush mountable models cannot be flush mounted in their support.
The non flush mountable models require a free zone around the active head.
(See page 17).

Flush mountable model

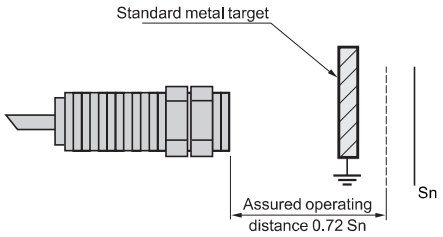

Non flush mountable model

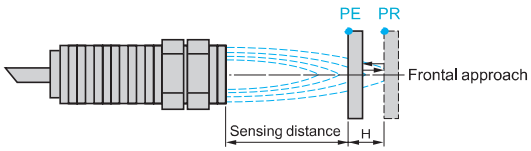

Capacitive proximity sensors
XT range

Terminology

H = Differential travel

PE = pick-up point, the target is detected
PR = drop-out point, the target is no longer detected

Definitions

In order to ensure that customers can make reliable product comparisons and selection, the standard IEC 60947-5-2 defines various sensing distances, such as:

Nominal sensing distance (Sn)
The rated operating distance for which the sensor is designed. It does not take into account any variations (manufacturing tolerances, temperature, voltage).

Effective sensing distance (Sr)
The effective sensing distance is measured at the rated voltage (Un) and the rated ambient temperature (23 °C ± 5 °C)
It must be between 90% and 110% of Sn.

Usable sensing distance (Su)
The usable sensing distance is measured at the limits of the permissible variations in the ambient temperature and at a supply voltage equal to 85% and 110% of the rated voltage.
It must be between 80% and 120% of Sr.

Assured operating distance (Sa)
This is the operating zone of the sensor.
The assured operating distance is between 0 and 72% of Sn.

Standard metal target

The standard IEC 60947-5-2 defines the standard metal target as a square mild steel (Fe 360) plate, 1 mm thick.
The side dimension of the plate is either equal to the diameter of the circle engraved on the sensing face of the sensor or 3 times the nominal sensing distance (Sn).

Repeat accuracy

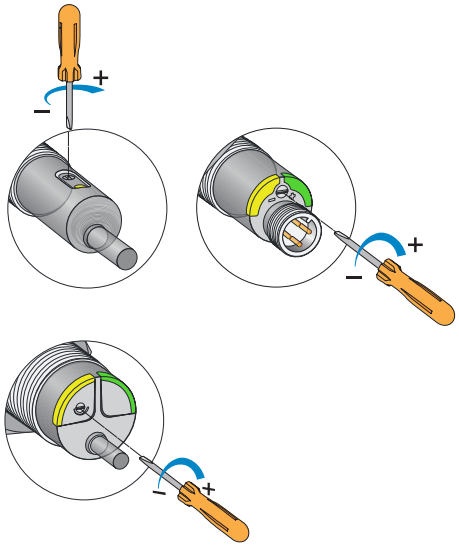

The repeat accuracy (R) is the repeatability of the sensing distance between successive operations. Readings are taken over a period of time whilst the sensor is subjected to voltage and temperature variations: 8 hours, 10 to 30 °C, Un ± 5%.
It is expressed as a percentage of the effective sensing distance Sr.

Differential travel

The differential travel (H) or hysteresis, is the distance between the operating point, as the standard metal target moves towards the sensor, and the release point, as it moves away.
This hysteresis is essential for the stable operation of the sensor.

Capacitive proximity sensors
XT range

Terminology *(continued)*

Sensitivity of the sensor

All our sensors incorporate a sensitivity adjustment potentiometer. This enables the sensitivity of the sensor to be adjusted to suit the type of object to be detected.

Depending on the sensor version, the sensitivity adjustment potentiometer is either mounted on the side or the rear.

The sensors are factory preset for nominal sensitivity.

Depending on the application, adjustment of the sensitivity could be necessary as follows:
- increasing the sensitivity for objects which have a weak influence (weaker): paper, cardboard, glass, plastic,
- decreasing the sensitivity for objects which have a strong influence (stronger): metals, liquids.

However, in the event of severe variations in the ambient conditions, do not increase the sensitivity of the sensor such that it is set to its maximum operating limits.

An increase in sensitivity causes an increase in the switching hysteresis.

Operating distances

The operating distance of the sensor is related to the dielectric constant (εr) of the object material to be detected.
The higher the value of εr, the easier the detection of the object will be.

The assured operating distance depends on the object material: Sa = Sn x Fc
Sa = assured operating distance,
Sn = nominal sensing distance of the sensor,
Fc = correction factor related to the object material.

Example: sensor **XT530B1PAL2** used to detect a rubber object.
Sn = 10 mm, Fc = 0.3.
Assured operating distance Sa = 10 x 0.3 mm.

The list below indicates the dielectric constant values of the most common object materials, together with their correction factors (Fc) for the nominal sensing distance of the sensor.

Material	εr	Fc
Air	1	0
Acetone	20	0.8
Alcohol	24	0.85
Ammonia	15…25	0.75…0.85

Capacitive proximity sensors
XT range

Environment

■ **Electromagnetic interference**
The sensors undergo electromagnetic interference testing in accordance with the recommendations of standard IEC 60947-5-2 (electrostatic discharges, radiated electromagnetic fields, fast transients, impulse voltages).

■ **Thermal influences**
It is advisable to remain within the values stated on the characteristic pages so as to avoid sensing distance drift and possible incorrect operation of the sensor.

■ **Chemical agents**
To ensure a long service life, it is essential that any chemicals coming into contact with the case of the sensor are non corrosive.

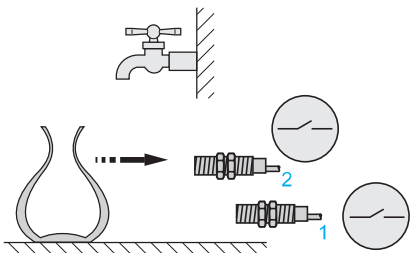

■ **Earthing**
Earthing of an object that has high conductivity increases the sensing distance.

Additional information relating to outputs

Refer to corresponding pages relating to inductive proximity sensors for:
■ Terminology.
■ Details and specific aspects of 2-wire and 3-wire type connection.
■ Connecting several sensors in series or parallel.

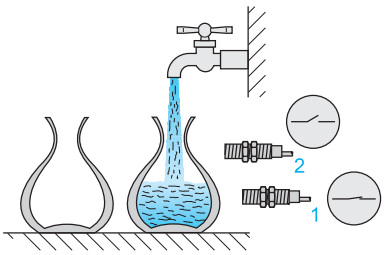

Application examples:

Bottle filling

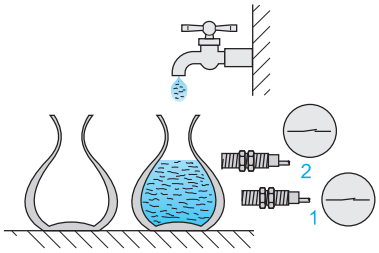

■ **Bottle arrival**

■ Bottles are fed on a conveyor for filling.
Sensors 1 and 2 are in an unoperated state.
Adjustment:
- sensor 1 is adjusted to detect the bottle,
- sensor 2 is adjusted to detect the water in the bottle.

■ **Bottle filling**

As soon as the bottle enters the detection zone of sensor 1,
the filling operation commences.
Sensor 2 remains in the unoperated state.

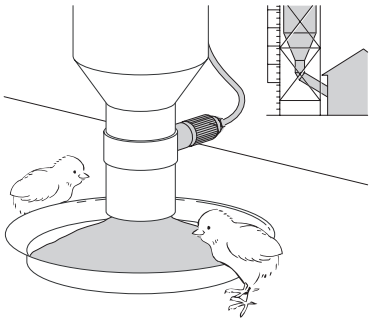

■ **Filling complete**

Sensor 2 detects that the required level has been reached and stops further filling.

Reminder: the wall of the container must be non metallic and its thickness ≤ 4 mm

Livestock feeder filling

Capacitive technology is particularly suited for the detection of feed levels in automatic dispensers for livestock. Any type of feed can be detected (pellets, powders, broths, grains, pastas, etc.).
The materials used, as well as the degree of protection of the sensor, have been specially selected to tolerate the acidic and dusty environments associated with this application.

Operating temperature		**°C**	- 10…+ 60						- 20…+ 70	- 10…+ 60	- 10…+ 60
Vibration resistance	IEC 60068-2-6		10 gn, ± 1 mm (f = 10…55 Hz)								
Shock resistance	IEC 60068-2-27		30 gn, 11 ms								
Resistance to electromagnetic interference											
Electrostatic discharges	IEC 61000-4-2	**kV**	8 (air) / 4 (contact)								
Radiated electromagnetic fields	IEC 61000-4-3	**V/m**	3								
Fast transients	IEC 61000-4-4	**kV**	2								

(1) These sensors do not incorporate overload or short-circuit protection and therefore, it is essential to connect a "quick-blow" fuse in series with the load (see page 12).

(2) The supply cable can have a 14 mm maximum diameter sheath.

Application example (XT230A2MDB)

Automatic feed system for livestock

Capacitive proximity sensors

XT range

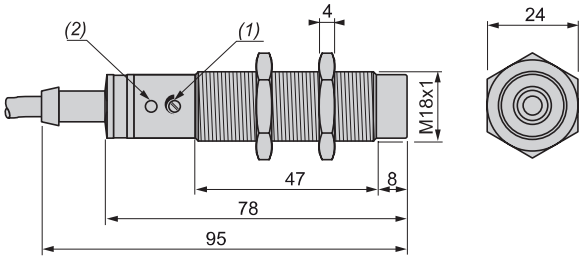

Cylindrical, non flush mountable. Plastic case

AC or DC supply

Dimensions

M18, pre-cabled

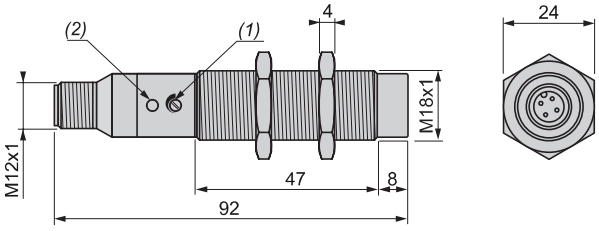

XT218A1●●L2

(1) Adjustment potentiometer.
(2) LED.

M18, M12 connector

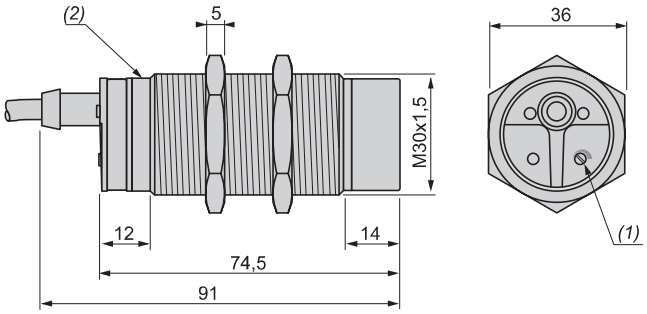

XT218A1PCM12

(1) Adjustment potentiometer.
(2) LED.

M30, pre-cabled

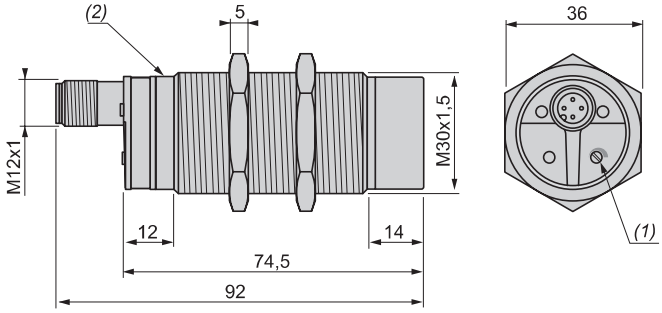

XT230A1●●L2

(1) Adjustment potentiometer.
(2) LED.

M30, M12 connector

XT230A1PCM12

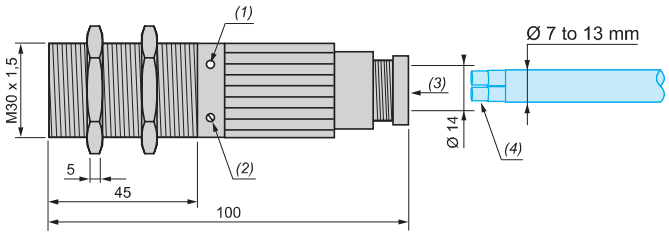

(1) Adjustment potentiometer.
(2) LED.

Dimensions *(continued)*

M30, screw terminals

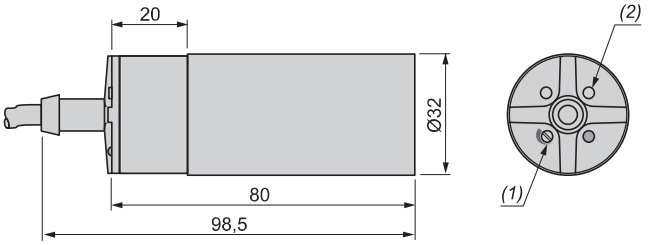

XT230A2MDB

(1) LED.
(2) Potentiometer.
(3) Entry incorporating cable gland.
(4) 2 x 1 mm² to 2.5 mm² wires max.

Ø 32, plain, pre-cabled

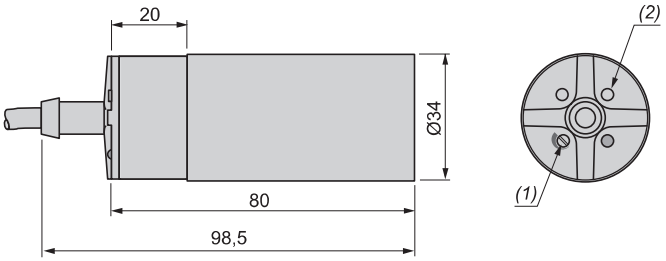

XT232A1FAL2, XT232A1FBL2

(1) Adjustment potentiometer.
(2) LED.

Ø 34, plain, pre-cabled

XT234A1PAL2

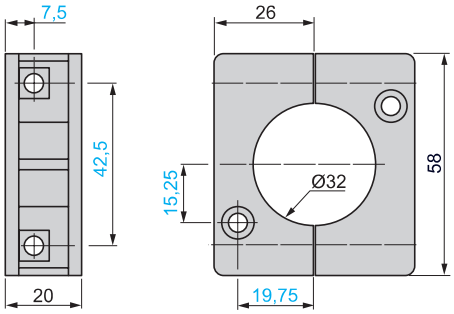

(1) Adjustment potentiometer.
(2) LED.

Capacitive proximity sensors
XT range
Cylindrical, non flush mountable. Plastic case
AC or DC supply

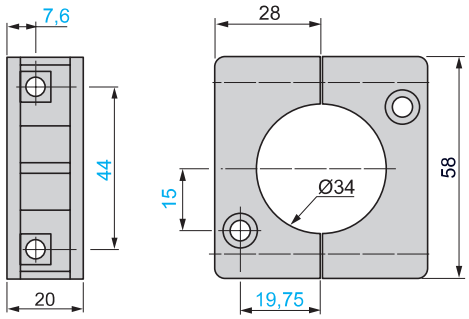

Dimensions *(continued)*

Accessories

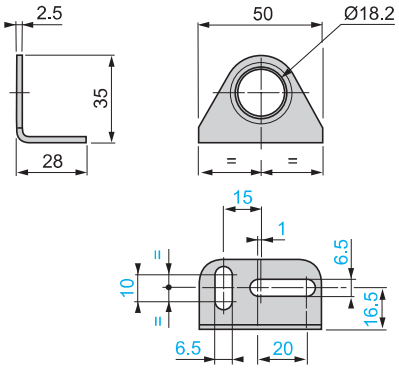

Mounting accessory (included with sensor XT232A1F●L2)

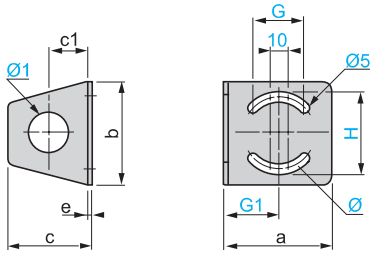

Mounting accessory (included with sensor XT234A1PAL2)

XUZA118

Schemes, adjustment, setting-up

Capacitive proximity sensors

XT range

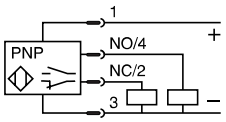

Cylindrical, non flush mountable. Plastic case

AC or DC supply

Wiring schemes

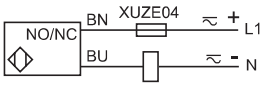

Connector version

M12 connector	4-wire ⎓, PNP NO + NC output, M12
	**XT218A1PCM12** **XT230A1PCM12**

Screw terminal version

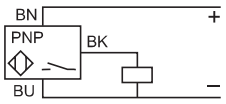

2-wire ≂ NO or NC output, selectable
XT230A2MDB

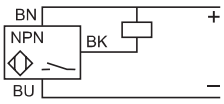

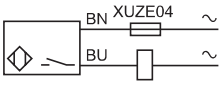

BN: Brown
BU: Blue

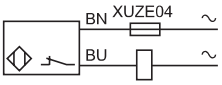

Pre-cabled version

Wire color	3-wire ⎓, PNP NO output	3-wire ⎓, NPN NO output	2-wire ∿ NO output	2-wire ∿ NC output
BU: Blue BN: Brown BK: Black	**XT218A1PAL2** **XT230A1PAL2** **XT234A1PAL2**	**XT218A1NAL2** **XT230A1NAL2**	**XT218A1FAL2** **XT230A1FAL2** **XT232A1FAL2**	**XT230A1FBL2** **XT232A1FBL2**

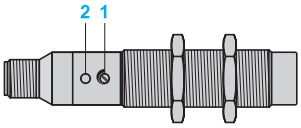

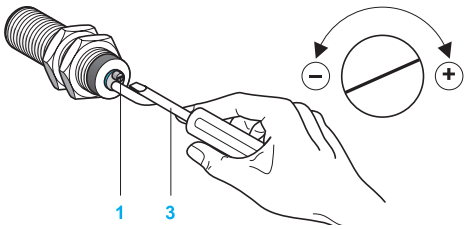

Adjustment

Sensitivity adjustment

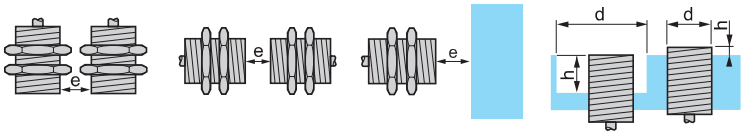

Adjustment from the side for	**XT218A1** **XT230A2**
Adjustment from the rear for	**XT230A1** **XT232A1** **XT234A1**

1 Adjustment potentiometer
2 LED
3 Adjustment using suitable screwdriver (included with sensor)

Setting-up

Minimum mounting distances (mm)	Side by side	Face to face	Facing a metal object	Mounted in support	
XT218A1, M18 x 1 non flush mountable	e ≥ 40	e ≥ 6 Sn	e ≥ 3 Sn	d ≥ 60	h ≥ 20
XT230A1, M30 x 1.5 non flush mountable	e ≥ 60	e ≥ 6 Sn	e ≥ 3 Sn	d ≥ 90	h ≥ 30
XT230A2, M30 x 1.5 non flush mountable	e ≥ 16	e ≥ 90 Sn	e ≥ 45 Sn	d ≥ 90	h ≥ 30
XT232A1, Ø 32 plain, non flush mountable	e ≥ 65	e ≥ 6 Sn	e ≥ 3 Sn	d ≥ 100	h ≥ 30
XT234A1, Ø 34 plain, non flush mountable	e ≥ 65	e ≥ 65 Sn	e ≥ 35 Sn	d ≥ 100	h ≥ 30

*Fixing nut tightening torque: **XT218A**: 3 N.m (26 lb-in), **XT230A**: 8 N.m (71 lb-in).*
*Cable gland tightening torque: **XT230A2**: 4 N.m (35 lb-in).*
