6. HEAT DISSIPATION CAPACITY

Testing the max. capacity of a cabinet to dissipate heat according to standard IEC 62208-1.

Configuration 1 (C1):
All outer surfaces of the cabinet are clear and not in contact with anything (floor standing, on structural bracket or frame for example).

Configuration 2 (C2):
The rear surface is in contact with a wall, all other surfaces are clear (standard case of wall mounting for example).

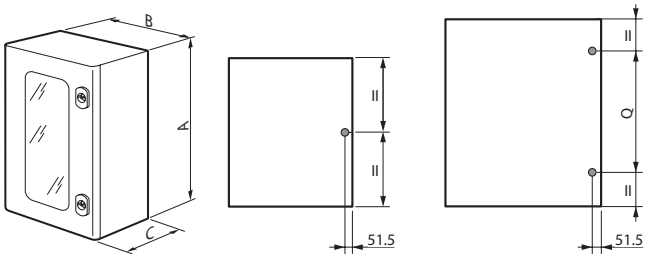

For other installation configurations, please consult us.
