FYK 40 TR

Square flanged ball bearing unit with set screw locking and extended inner ring, composite housing, ISO

These square flanged ball bearing units are compliant with ISO standards. The unit consists of an insert bearing, with an extended inner ring and set screw locking, and is suitable for applications where the direction of rotation is constant or alternating. The bearing is mounted in a composite housing, which can be bolted to a machine wall or

frame. Ball bearing units can accommodate moderate initial misalignment, but normally do not permit axial displacement.
