2/2-Way; sub-base connection; DN 1,2-2,4; 0-21 bar

Advantages/Benefits

- **Coil can be changed easily with valve in place**
- **Coil can be locked in 4x 90° positions or move freely between, as required**
- **Medium is only in contact with the valve internals and body**
- **High-quality seal material FPM (Viton) standard**
- **Wide range of cable plug options Type 2506**
- **Compact design**

Design/Function

The valves are based on a modular concept comprising three basic elements; Valve assembly, push-over coil and standard cable plug. The valve assembly consists of a body to which the armature guide tube containing the plunger, seals and springs is attached.
The coil is pushed over the guide tube and thus isolated from the medium.
The medium is only in contact with the valve internals and body.

A wide selection of pipe and orifice sizes is offered. Valves are available in brass. All valves have high-quality viton (FPM) seals as standard.

To simplify ordering, a wide selection of standard combinations of valve body, push-over coil and standard cable plug can be ordered with one order number.

Cable plug options of Type 2506 are available to suit special electrical application requirements.

– The modular concept provides flexibility to meet application requirements.

– The valve is interchangeable with Type 201.

Manifolds

Manifold Mounting

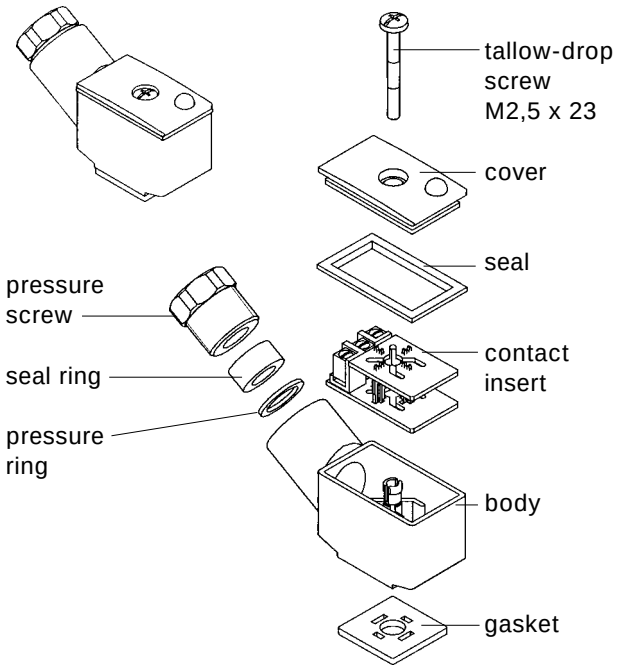

The manifolds for 1 to 6 valves have a common pressure inlet and individual outlet for each valve. Type 6011 may also be mounted together with Type 6012 valves (circuit function C, de-energized, outlet A exhausted) on the same manifold. The electrical connection can be either to the right or left of the manifold.
Manifolds may be coupled together using special push-fit O-ring connection nipples for linking the pressure inlets P. Manifolds joined together in this way should be securely mounted.
