Video single leads

4-Pole SVHS breakouts

A 4-pole mini din (s-video) male pre-moulded to two pieces of 75 Ohm mini coax each with a female BNC connector. The signal from the 4-pole connector is split into the two component parts of Luminance and Chrominance. Each of these signals is sent to one of the BNC's identified by the colour of strain relief boot fitted, namely Luminance-yellow and Chrominance-white. This breakout enables longer cable runs to be achieved by using standard BNC leads to carry the same signals. The breakout is 150mm long and is only available with black cable.

Order code	Length
110-028-919	150mm
