General

The Nu-Tech Hygienic Machine Mount has been designed for those industries and applications where Hygiene is of the up most importance. The threaded section which is exposed on standard levelling feet and an area of potential contamination has been replaced with a stud manufactured with only a part threaded section which is then covered by an adjustable sleeved collar. The base has been designed with smooth polished easy clean profile and incorporates a rubber seal between the stud and base interface. Ideally suited for applications within the Food, Diary, Medical, Pharmaceutical industries and Laboratory/Clean Room environments.
