SURFACE CLEAN

PRODUCT DESCRIPTION

B225 is a highly alkaline detergent composite containing solvents to enhance grease removal properties. It contains phosphate and the alkali builders have been specially selected to optimise soil suspension.

PRODUCT DILUTION

B225 is suitable for use by all normal cleaning techniques, mopping, scrubbing, spraying etc. Before use it can be diluted with up to 40 parts cold water depending upon the severity of the application. In most cases no rinsing will be required, the surface may be simply wiped clean.

PRODUCT APPLICATION

B225 is an extremely versatile cleaner, since by selecting the appropriate dilution it can be used to clean almost all hard surfaces- walls, floors, paintwork, machinery, etc. Its degreasing properties lead it to be widely used in kitchens, restaurants, abattoirs, garages, factories, etc. B225 can also be used as a safe replacement for flammable solvent in degreasing machine parts. The product will also remove old wax from floors and may be used as an oven cleaner. It can affect glass, aluminium and certain plastics so should be pretested on these surfaces.
