Product Information Sheet
Solent Cleaning and Hygiene Handwipes & Cloths

Attachments
On Coloured and White rag grades…every effort is made to find and remove pins, buttons, zips and any other attachments. Whilst it is extremely unlikely that Coloured and White rages contain such items, no guarantee can be given that they are completely free of attachments. It is recommended that these grades be handled with some care as a result.

Cotton sheeting, linen and towelling materials are all **Guaranteed Free of Attachments.**

Skin Cancer
Prolonged exposure of skin to oil-based liquids can cause skin cancer. **Do not keep oily rags in your pocket** and in general avoid unnecessary contact with oil. Always wash hands thoroughly after work.

Aids
It is not possible to acquire the AIDS virus as a result of using wiping rags manufactured from reclaimed materials. This point is made quite clear by the HEALTH AND SAFETY EXECUTIVE in their booklet AIDS AND EMPLOYMENT.
'(AIDS) infection is not spread though the air (for example, by coughing or sneezing) or by touch. Nor is there any danger from handling objects which have been used by an infected person, or from sharing an office or washroom facilities with them.'

The DHSS has also clearly stated that clothing carries no risk of transmitting the AIDS virus.

Storage
Used wiping rags represent a FIRE HAZARD where they have been used in conjunction with oils and/or solvents. Store discarded wipers safely, well from naked flames and other heat sources.
