YORK ABRASIVES

DATA SHEET

115mm Flap Disc - Type 29 - Aluminium Oxide - Fibre Backed - P36

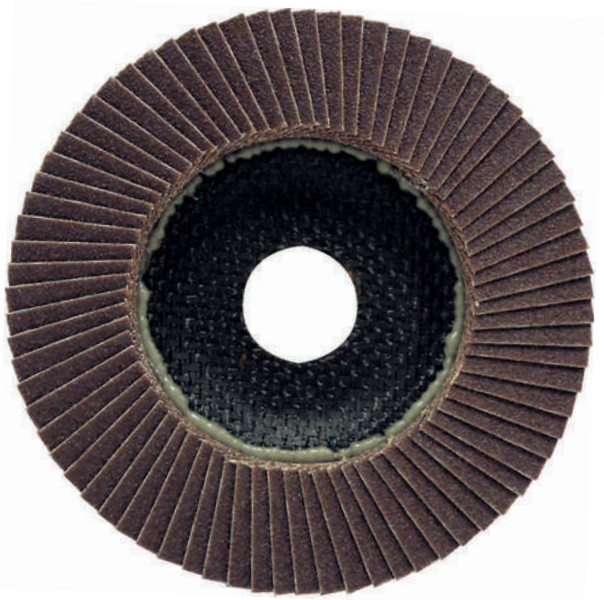

Aluminum oxide is the most commonly used abrasive. Best-suited for general purpose deburring and blending, it is tough, economical and fracture resistant. Commonly used on ferrous alloys, high-tensile materials and wood.

Conical flap discs are a high performance alternative to sanding discs where surface finish is important. On light gauge sheet metal, the overlapped abrasive strips slowly wear away revealing fresh abrasive.

Features and Benefits
- The overlap design reduces clogging and ensures the disc always cuts effectively
- Provides a consistent finish throughout disc life
- No backing pads needed

Technical Specifications
- Diameter: 115mm
- Grit: P36
- Maximum operating speed: 15,300rpm

Standards
EN12413

Note.
Safe to use at 80m/s on any grinder.
Pack of 10.
